Sarun (Joe) Teeravechyan

TECHNOLOGY-ENABLED TRANSFORMATION • DIGITAL DELIVERY LEADERSHIP

312-953-2665 | steerave@gmail.com | joet.build | linkedin.com/in/sarun-teeravechyan

EXECUTIVE SUMMARY

Senior digital delivery leader with 20+ years driving large-scale, technology-enabled transformation for global brands. Delivers complex consumer platforms at enterprise scale, serving tens of millions of users across multi-market, regulated environments with heavy compliance requirements, and translates ambiguous business needs into shipped technology outcomes. Actively building applied AI and automation capability through production-level personal systems and formal coursework at MIT Sloan.

CORE COMPETENCIES

Technology-Enabled Transformation Delivery | Digital Product & Platform Delivery | Enterprise Program Governance | Cloud-Based Platforms (AWS) | API Integrations & Payment Systems | Identity, Fraud Prevention & Risk Controls | Data Privacy & Accessibility Compliance | Vendor & Partner Management | Applied AI & Workflow Automation

PROFESSIONAL EXPERIENCE

The Marketing Store | *Chicago, IL (Remote)* Apr 2018 – Mar 2026

Senior Director, Digital Delivery *Feb 2022 – Mar 2026*

- Led parallel delivery of two distinct McDonald's Monopoly programs in 2025 across separate platforms, teams, and regulatory contexts: the US program (18.6M unique players, 178M site visits, 260M game plays) and the Canada program (2.84M registrations, 50.6M code entries, 48.5M double plays).
- Delivered the first-ever API-based cash prize payout system in program history on the Canada program, transforming a manual, mailed-check process into real-time digital disbursement via Bank of America and Interac integration. The system processed $260K+ in live consumer payouts at <1.5% rejection rate, reduced fulfillment cycle from weeks to hours, and established a reusable integration pattern for future programs.
- Led an 8-person digital delivery team and coordinated 75+ matrixed engineering, QA, and program resources across distributed onshore and offshore locations, executing one of McDonald's largest annual North American consumer marketing programs.
- Drove a multi-layered fraud prevention and identity verification system for the US program (20+ WAF rules, reCAPTCHA scoring, OTP verification, address-hash de-duplication), partnering with the lead architect and engineering on technical design and with internal counsel, external counsel, and client legal to balance fraud lockdown against user friction and litigation risk. Day-1 AMOE submissions showed only 0.9% flagged for fraud across hundreds of thousands of entries.
- Owned technical delivery of the consumer acquisition funnel across both programs, translating marketing-defined objectives into platform behavior that drove 5% YoY registration growth and 77% registrant-to-player conversion on the Canada program, 81% enrollment-to-gameplay conversion on the US program, and 96% take rate on a redesigned Canada bonus-play mechanic following UX changes driven by 2024 user feedback.
- Drove WCAG 2.2 Level AA accessibility compliance through third-party testing, remediation, and validation with assistive technologies, and partnered with client Legal on multi-jurisdictional compliance across US and Canada including GDPR and CCPA data privacy governance for cross-border traffic.

Director, Digital Delivery *Apr 2018 – Jan 2022*

- Led technical execution of large-scale consumer-facing platforms across web, mobile, and backend, integrated with a global mobile app ecosystem and supporting national promotional campaigns that reached tens of millions of consumers annually.

- Managed multiple concurrent cross-functional programs, coordinating engineering, product, creative, and QA teams to deliver multi-system promotional experiences spanning authentication, backend services, and consumer-facing interfaces.
- Introduced emerging technologies including AR, 3D asset pipelines, and image recognition into the promotional platform to expand consumer engagement mechanics.

Iris Worldwide | *Chicago, IL* Feb 2017 – Apr 2018

Director, Digital Delivery

- Built and led an in-house engineering and program management practice from the ground up, supporting multiple concurrent technical initiatives.
- Established cross-functional team structures including program managers, engineers, and technical producers to scale delivery capacity.
- Provided technical solution architecture guidance across enterprise platform initiatives and implemented program governance including scope management, quality assurance, and change management practices.

Leo Burnett | *Chicago, IL* Sept 2013 – Jan 2017

Senior Technical Project Manager (promoted from Technical Project Manager)

- Directed technical delivery across 50+ engineers and QA specialists at an offshore vendor partner, executing large-scale digital promotional programs including sweepstakes, interactive games, and consumer engagement platforms.
- Owned monthly release cycles and production deployment across a dozen development, staging, and production environments, driving compliance workstreams including load, vulnerability, and security testing.
- Implemented graph database technologies supporting behavioral analytics and dynamic content personalization.

ADDITIONAL EXPERIENCE

Full Stack Developer | Switchfast Technologies | Chicago, IL

- Developed web applications using C# and the ASP.NET framework; designed relational database architectures for web applications; delivered websites and marketing solutions for small and mid-size businesses.

APPLIED AI & AUTOMATION EXPERIENCE

- Architected and shipped end-to-end AI automation systems in Python and TypeScript using Claude Code, translating ambiguous workflow problems into production-ready solutions spanning document ingestion, real-time event detection, intelligence pipelines, and user-facing interfaces.
- Designed an AI-driven document processing pipeline that ingests PDFs with OCR, classifies vendors using cross-year learning, and incorporates human-in-the-loop review via Google Sheets to improve accuracy and reduce recurring manual effort.
- Built additional production-level systems including a multi-source job intelligence pipeline (LLM-based fit scoring, ATS detection, and feedback-driven refinement) and a real-time visual event detection service (multi-channel desktop and Slack alerting).
- Applied disciplined AI development practices including test-driven iteration, guardrails, caching, pattern-based classification, and modular architecture across projects with substantial automated test coverage.

EDUCATION

Master of Science (M.S.), Managing Information Systems | DePaul University, Chicago, IL

Dual Bachelor of Arts (B.A.), Computer Science & Economics | Knox College, Galesburg, IL

CERTIFICATIONS

AI Adoption: Driving Business Value and Impact | MIT Sloan (In Progress)

Applied Agentic AI: Systems, Design & Impact | Microsoft (In Progress)
